CosKin

CosKin is a Swiss company, with the support of local universities such as HES-SO. CosKin is part of the Health Valley and supported by The Ark Foundation.

These partnerships have enabled the company to forge strong links with dermatologists, the cosmetics industry and formulation laboratories. In addition to its local implementation, Coskin has forged links with international associations such as the Cosmetics Valley, cosmetic companies in Africa.

Reveals the nature of skins in 3 seconds!

Our Mission

We have developed and manufactured a skin analysis services that helps Cosmetics brands to promote their products in accordance with their client's skin specificity.

We truly believe that everyone should be using a cream or lotion that best fit to their skin. Coskin provides a customized skin analysis that helps your customer to make make the right choice.

Our Vision

At Coskin our ambition is not to be the biggest skin care company. What drives us is providing the knowledge necessary to decide which cream or lotion is going to be the best on your skin.

Our vision is to provide the ability to do the best skin diagnosis in order to choose the right cosmetic product.

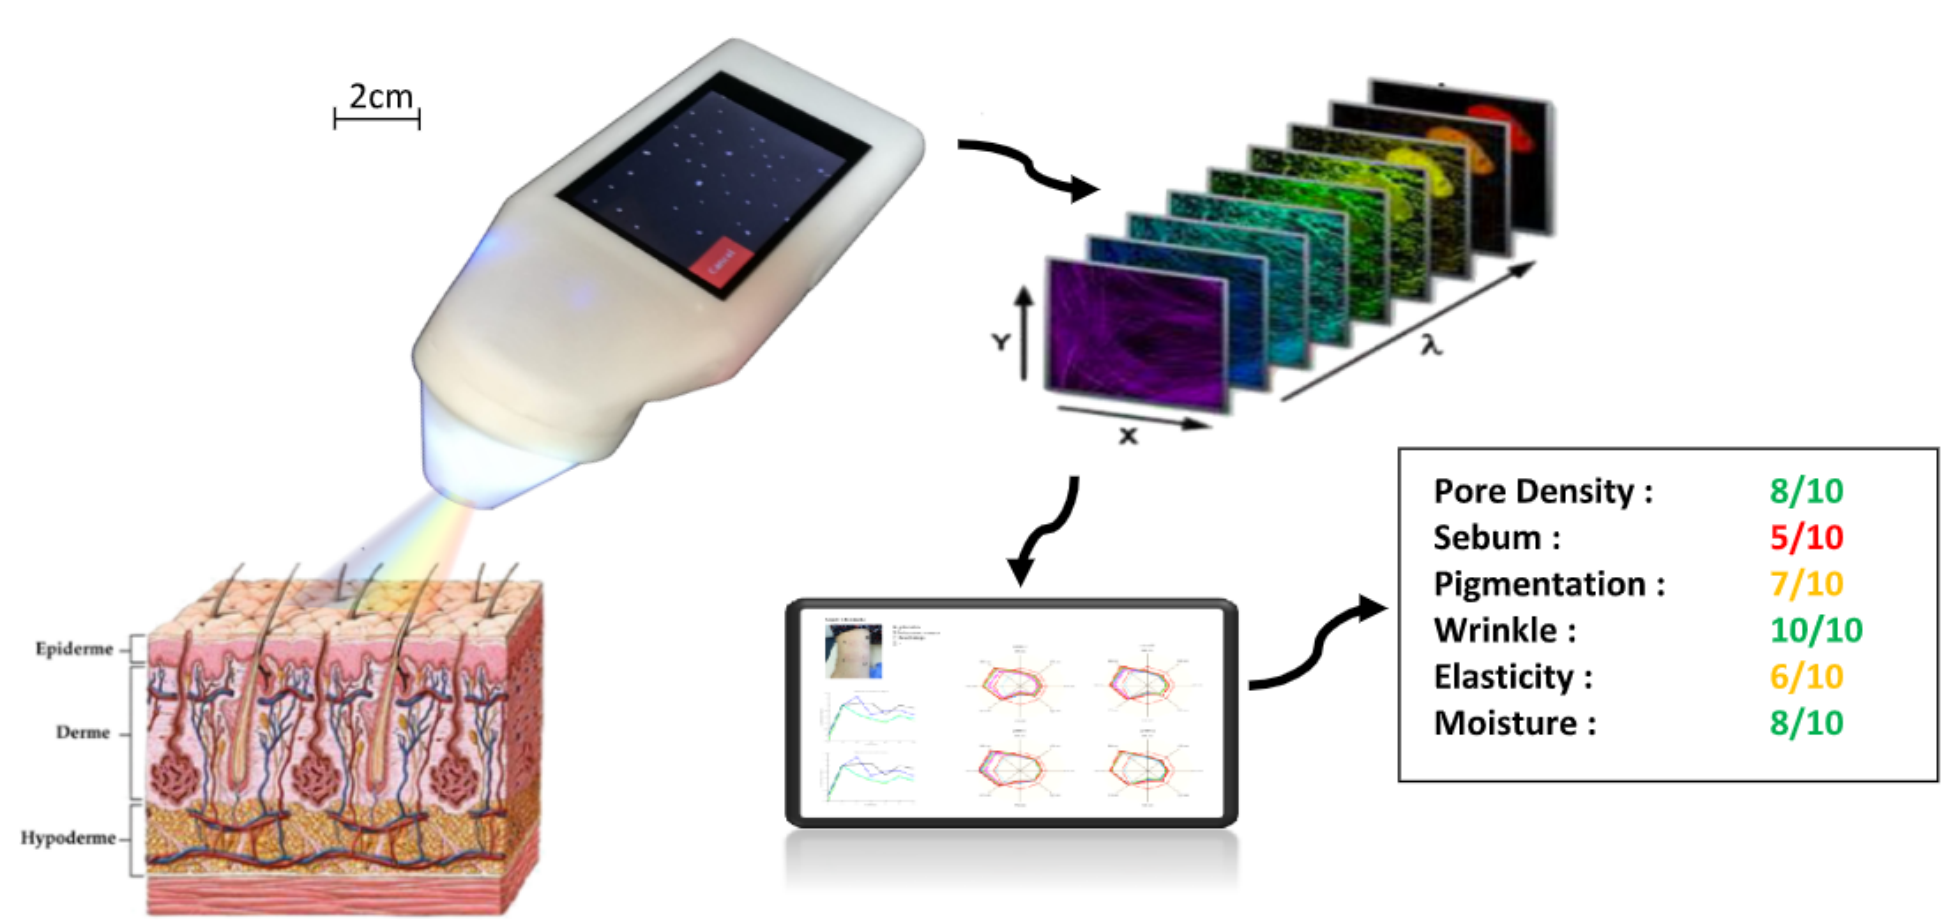

CosKin: non-invasive skin analysis

CosKin device analyzes the skin in a non-invasive way. In the field of cosmetics, this system is made available at points of sale to beauty advisors to increase the number of sales while offering personalized customer service and maintaining long-lasting relationships with customers.

CosKin has developed an embedded system that acquires multiple images in less than three seconds, it is easy to use and the device gives results very quickly. Each of these images are obtained by illuminating the skin with a different wavelength.

The advantage is to obtain more comprehensive information from deeper skin layer than a traditional camera

Main Feature

Fast Analysis

Compact & Ergonomic

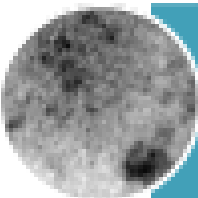

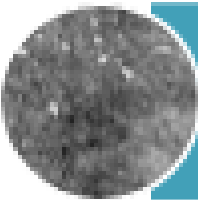

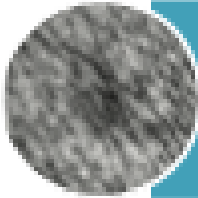

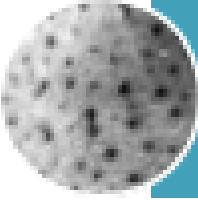

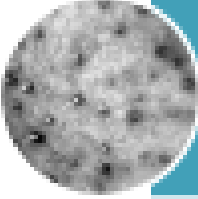

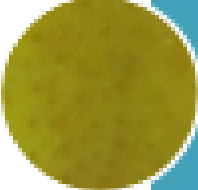

Algorithm

Big Data

Our measurement

	Pigmentation	Measurement of the uniformity of skin pigmentation
